

SHAH DELPHI MUHAMMAD

+6281225201937 | shahdelphimuhammad@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Fresh graduate Informatics student with strong interest in Artificial Intelligence, Data Science, and Software Development. Passionate about developing data-driven and AI-based solutions for real-world problems through machine learning, backend systems, and mobile applications. Experienced in academic and independent study projects involving computer vision, sentiment analysis, and forecasting systems. Eager to continuously improve technical and analytical skills while contributing to innovative technology development.

EDUCATION

Universitas Pembangunan Nasional Veteran Yogyakarta

Bachelor of Informatics

2022 – 2026

- Thesis: Implementation of YOLOv8 Segmentation for Palm Oil Leaf Disease Severity Detection
 - Relevant Coursework: Machine Learning, Natural Language Processing, Database Systems, Software Engineering, Mobile Development, Data Analytics
 - GPA: 3.61
-

TECHNICAL SKILLS

Programming Languages

- Python, Golang, JavaScript, PHP, SQL, Dart

Web & Mobile Development

- Frontend: HTML, CSS, Tailwind CSS, JavaScript, React.js, Next.js
- Backend: Golang Fiber, Node.js, Express.js, Laravel
- Mobile: Flutter

AI/ML & Data Science

- Machine Learning, Deep Learning, Computer Vision, NLP, LSTM, YOLOv8
- Sentiment Analysis, Forecasting, Data Analytics
- Tools & Libraries: Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Streamlit

Databases & Backend Systems

- PostgreSQL, MySQL, Sequelize ORM, Database Design, CRUD Operations

Tools & Platforms

- Git, GitHub, Postman, Google Colab, VS Code
-

PROJECTS

YOLOv8 Segmentation for Palm Oil Leaf Disease Severity Detection

Thesis Project, 2026

- Developed computer vision model for palm oil leaf disease severity detection using YOLOv8 segmentation.
- Performed dataset annotation, training, validation, and evaluation using segmentation metrics.
- Improved disease visualization accuracy through object segmentation techniques.
- Created research documentation and evaluation analysis for academic publication.

Simulation-Based Analysis for Sales Forecasting, Ordering Policy, and Inventory Optimization of Perishable Products in Retail Industry

Supply Chain Analytics Project, 2026

- Developed simulation-based analysis for forecasting sales, inventory control, and ordering policy optimization on perishable retail products.
- Implemented SARIMAX, LSTM, and hybrid SARIMAX–LSTM models to analyze seasonal demand patterns and promotional spikes.
- Conducted inventory and periodic review policy analysis to minimize product waste and improve stock management efficiency.
- Analyzed retail supply chain datasets involving sales forecasting, replenishment strategy, and inventory optimization for perishable goods.

Deep Learning-Based Sentiment Analysis on Social Media Dataset

MSIB Batch 7 Independent Study, 2024

- Developed deep learning-based sentiment analysis model on social media datasets using LSTM architecture for text classification.
- Performed NLP preprocessing techniques including text cleaning, tokenization, stopword removal, TF-IDF vectorization, and sequence padding.
- Integrated Gemini LLM API for topic extraction and zero-shot topic classification to enhance sentiment interpretation.
- Built interactive Streamlit-based application for real-time sentiment prediction and topic modeling with approximately 88% classification accuracy.

Web Development for PT Madani Kreatif

Fullstack Developer, 2026

- Developed and maintained fullstack web application for PT Madani Kreatif using React.js, Golang Fiber, GORM, PostgreSQL, and REST API architecture.
- Customized and integrated responsive frontend templates to align with company branding and business requirements.
- Built backend services including authentication, RBAC system, content management, order management, and file upload handling.
- Implemented modular backend architecture with JWT authentication and optimized API performance for scalable web services.

Web Development for “Ternak Web” System – Ministry of Public Housing and Settlement Areas

Backend Developer, 2025

- Developed centralized backend API for “Ternak Web” system used across multiple regencies and cities in Central Java and Yogyakarta.
 - Built scalable backend services using Node.js, Express.js, Sequelize ORM, MySQL, Redis, and REST API architecture.
 - Implemented JWT authentication, role-based access control (RBAC), visitor tracking, and secure file management system.
 - Optimized backend performance and multi-tenant architecture to support scalable government web service operations.
-

CERTIFICATIONS

- Graduate – MSIB Batch 7 Independent Study in Data Science | PT Mitra Talenta Group (Celerates), 2024
 - Backend Development Internship – Ministry of Public Housing and Settlement Areas (PKP), 2025
 - Junior Mobile Programmer (BNSP Certification) | Digital Talent Scholarship, 2025
 - Belajar Dasar Visualisasi Data | Dicoding Indonesia, 2025
 - Code Generation and Optimization Using IBM Granite | IBM, 2025
 - Mindset Digital (Micro Skill) | Digital Talent Scholarship, 2025
-

LEADERSHIP & ACTIVITIES

Community Service Program (KKN)

Team Leader | 2025

- Led student community service program activities and coordinated team responsibilities during field implementation.
- Managed communication, task distribution, and collaboration to ensure successful program execution.

PKK GAYAKTA 2023

Student Mentor | 2023

- Guided and assisted new students throughout department orientation and campus adaptation activities.
- Supported students in understanding academic systems, campus environment, and student activities.

Informatics Esport Cup 2023

Consumption Staff | 2023

- Managed food and beverage logistics for committee members during event operations.
- Coordinated consumption availability to support smooth event execution.

Indonesian Industrial Outlook 2024 Seminar

Equipment & Transportation Staff | 2023

- Prepared event equipment and transportation logistics for hybrid seminar activities.
- Assisted operational coordination for both online and offline seminar sessions.

ADDITIONAL INFORMATION

- Languages: Indonesian (Native), English (Intermediate)
- Interests: Artificial Intelligence, Data Analytics, Business Analytics, Supply Chain Analytics, Financial Market Analysis
